# Hellblaster plasma gun

# Step-by-step

# Paints required:

## Hellblaster plasma gun
- Mechanicus std grey
- Abaddon black
- Ivory (Vallejo)
- White
- Khorne red
- Vermilion (Vallejo – Evil suns scarlet can be used)

**Basecoat the gun with a 2:1 mix of abaddon black & mechanicus std grey**

**Now glaze all the raised areas on the gun with pure mechanicus std grey – this is our start on building up the light reflections.**

Now glaze the middle of the previous glazed areas with a 1:1 mix of mechanicus std grey & ivory.

Now glaze the very middle of the previous glazed area with pure ivory . Furthermore shade all the recesess with abaddon black.
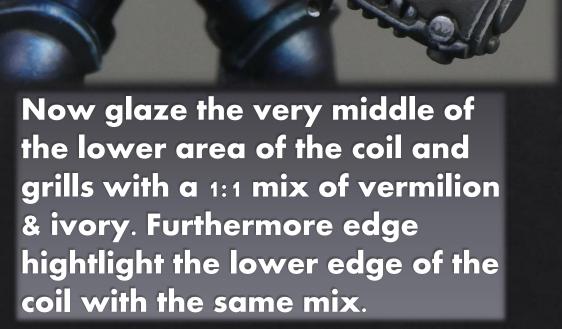

Now edge highlight the gun with a 1:1 mix of mechanicus std grey & ivory .

Now leave just a couple of dots once again in the very middle of the previous glazed areas with pure white.

Basecoat the plasma coil with khorne red

Now glaze on the lower area of the plasma coil, and in between the grills with vermillion – add 2-3 parts of water.

Now glaze in the middle of the lower area of the coil and in between the grills in the middle too with a 2:1 mix of vermilion & ivory.

Now glaze the very middle of the lower area of the coil and grills with a 1:1 mix of vermilion & ivory. Furthermore edge hightlight the lower edge of the coil with the same mix.

We now glaze only the very middle of the lower area of the coil with pure white. Furthermore glaze around the edges of the coil with thinned down vermilion — add 3-4 parts of water. This is what gives the glow effect!

Now edge highlight the coil grills with a 1:1 mix of khorne red & abaddon black. Plasma gun is done!
