Known issues:
- <u>Android version:</u> if you previously installed the "sex_tutoring_patch.rpy" file, it can interfere with the new "sleeping with" function. You may have to manually remove the file from your device, in the same manner you installed it.
  - You will now if you need to do this if when you invite someone to sleep with you, you do not see an image of them sleeping, nor one of them in the morning.
  - If you did not manually add this file in the past, you shouldn't need to take any action.
